The 1988 First Annual Conference of the International Neural Network Society (INNS) will bring together over 2,000 academic scientists, engineers, students, government administrators, industrial commercializers, and financiers in an open forum for the advancement of the full spectrum of significant neural network research and development, from biology through technology.

Formed in 1987 in response to the extraordinary international interest in neural network research, INNS includes among its founders many of the most distinguished leaders of the field. By Winter, 1988, INNS membership had grown to 1,600 of the field's most active researchers, from 33 countries and 45 states. These are the people who will determine the future of this strategic technology.

The INNS invites all those interested in the exciting and rapidly expanding field of neural networks to attend its 1988 Annual Meeting. The meeting includes plenary lectures, symposia, contributed oral and poster presentations, tutorials, commercial and publishing exhibits, government agency presentations, and social events.

Join us in Boston in September!
